GROWING INSTRUCTIONS

Basil
Ocimum basilicum
Germination in 15 - 30 days.

- 1/ Choose a suitable container with drainage holes.
- 2/ Fill with seed raising compost and firm down gently.
- 3/ Water generously with fine spray and leave for a few minutes to allow the water to soak in.
- 4/ Break off each Seedstick carefully and push point first into the compost up to the printed depth line.
- 5/ When seedlings emerge leave the stick in position and allow the strongest plant to grow on.
- 6/ These seeds are suitable for growing in domestic gardens.
