

carbon neutrality initiatives

Carbon neutrality initiatives – November 2017

It is Sense2's policy to make changes to our working practices for the good of the environment.

Electricity

We now specify all new lighting in our offices to be LED, reducing our future electricity usage by an estimated 40%.

We now shut off all power in the evenings and do not leave any electronic devices on standby.

All new device purchases are made with low power usage as a crucial component of the purchasing decision.

Transportation

We automatically select carbon offset on all business flights.

We do not use courier services unless absolutely necessary.

All staff are asked to use public transport rather than drive wherever possible.

Recycling

We always use recycled paper and our recommend as our first option on all print jobs.

We recycle paper and other office products wherever possible.

Water usage

We have installed a toilet water system using grey water from a rainwater tank to minimize our water usage
